

Our portfolio of fiber-based trays, bowls, and discs is designed to go from the freezer to an oven or microwave, allowing the consumer to quickly warm up a meal with minimal preparation.

Providing a fiber-based alternative to plastic trays, these products can be made in a variety of shapes and sizes. They can also include structural features like multiple compartments or rolled rims. Our pressed products can also incorporate microwave-active materials to provide even heating, crisping and browning to ensure high product quality and a consistent consumer experience.

Sustainability

- Fiber-based alternative to CPET and PP trays
- Typically provide a more than 90% reduction in plastic
- Passed Western Michigan University tests for repulpability

Operational Efficiency

- Customizable tray, bowl, and disc formats
- Runs efficiently on filling lines
- Equipped to scale from small-to-large volumes

Consumer Experience

- Allows consumers to enjoy a hot meal or snack within minutes
- The addition of active microwave technologies delivers efficient browning and crisping and promotes even heating of food
- The container can be placed directly into a microwave or oven, enhancing convenience

Pressed Products: Trays, Bowls & Discs

Our interior and exterior print capabilities allow you to leverage the billboard space of the tray for a more personalized design.

This truly customizable packaging delivers end-to-end results—from operational efficiency on filling lines to maximum consumer convenience in reheating and product consumption.

An ideal solution for frozen pizza, entrees, pot pies, side dishes, and more.
