IntegraFlex™ On-The-Go Packaging

IntegraFlex™ is an integrated paperboard carton and flexible paper package that ships flat and easily pops open into a holder, ideal for consuming on-the-go food items.

This product line is highly customizable, including the paperboard carton and the flexible material on the inside. The pouches are microwavable and allow the consumer to eat directly out of the package without having to transfer the food to another container.

Great for holding products like oatmeal, snacks, and dried pasta, it can also lie on its side for food items such as hamburgers and sandwiches, providing additional structure to prevent crushing in a bag.

Sustainability

- Carton and inner bag are made from renewable plant-based fiber from sustainably managed forests

Operational Efficiency

- Ships flat, and can be hand- or machine-filled
- Highly customizable and suitable for a wide range of applications

Consumer Experience

- Stands safely upright and is easy to eat out of
- Suitable for heating in a microwave oven
- Easy for consumers to open and eat on-the-go
