Pressed trays and bowls – lower impact, high performance

Our broad portfolio of pressed trays and bowls in paperboard and aluminum offers an economical and effective alternative to traditional CPET, PE and PP trays. Ideal for a range of chilled, frozen and foodservice applications, the trays and bowls are suitable for heating in both conventional oven and microwave.

Select the profile to meet your needs

With a range of square, rectangular and round shapes, and with shallow to deep options, our trays and bowls are available in both single and multi-compartment designs. We offer both paperboard and aluminum trays in an array of sizes and formats to meet your needs.

In this catalogue, you will find:

Pressed paperboard trays **3**

Food-to-go, containers and lids 5
Rectangular trays 6
Bakery, cake and tart plates 9
Vacuum skin packaging (VSP) trays 10
Modified atmosphere packaging (MAP) trays 10
Plastic-free trays 10
Oval trays 12
Round trays 12
Plates 12
Square trays 13
Multi-compartment trays 13

Pressed aluminum trays **14**

Rectangular aluminum trays 16
Round aluminum trays 19

Pressed paperboard trays

Paperboard trays to reduce plastic and strengthen your brand

Our paperboard trays are manufactured using up to 90% renewable plant-based fibre from sustainably managed forests. Compared to a traditional tray made of plastic, our paperboard trays can reduce plastic amount by up to 90% while using an internal barrier/sealing polymer to safeguard the contents. We can also offer plastic-free trays for products with a non-plastic barrier solution.

Create eye-catching designs that stand out on the shelf

Paperboard trays are an excellent alternative to enhance your branding. Interior and exterior print capabilities provide great opportunities for high-impact branding and messaging.

Safeguard your product

Our range of coatings and films provide a safe seal and effective barrier to suit the needs of your food application. Take advantage of a one-stop-shop solution for modified atmosphere packaging (MAP), vacuum skin packaging (VSP) and flow wrap packaging.

Some benefits of our pressed paperboard tray and bowl portfolio:

- Broad range of profiles
- High impact graphic capabilities
- Plastic-free options
- Susceptor laminates for even heating
- Range of coatings and films
- One-stop-shop solution

Pressed aluminum trays

Aluminum trays: perfect for even heating and crisping

Aluminum is a plastic-free alternative to conventional trays, and is particularly suitable for products to be cooked in a conventional oven, and under certain conditions in a microwave.

An efficient alternative to plastic

Aluminum can be recycled many times at a low energy cost and retains its properties during recycling better than plastic.

Resistant to both cold and hot temperatures

Aluminum can withstand a wide range of temperatures without losing its properties, making it suitable for both high-heat and freezing processes. This means it's a great alternative for ovenable ready meals, as well as bakery, takeaway and more.

With many decades of experience in aluminum trays, we offer products with the following benefits:

- Large standard range of sizes
- Resistant to temperature differences
- Low weight and high stability
- Works for conventional oven
- Microwaveable under certain conditions
- Ideal for recycling
