

EnviroClip™ is a clip-style multipack solution for cans that uses the least amount of paperboard compared to other multipack formats and is an alternative to plastic rings and shrink film. Our unique, patented clip incorporates Z-Flute™ - adding strategic reinforcement through lamination - delivering a strong clip that performs in both cold and humid conditions.

EnviroClip is applied on our high-speed AutoClip™ equipment and is ideal for standard 12 oz and 16 oz cans in 4-, 6-, and 8-pack configurations.

Sustainability

- Paperboard solution without plastic lamination
- Made from renewable wood-based fiber from sustainably managed forests
- Recyclable in household waste streams after use
- Uses the least amount of paperboard compared to other multipack formats

Operational Efficiency

- Machinery has a small footprint, and can run at a range of speeds, from manual application to high-speed automation
- Machinery can be incorporated into, or closely coupled to, other packaging formats to create flexible systems for all can types and pack formats
- Product-pitched machine provides maximum efficiency and speed capability
- EnviroClip provides support and protection for standard cans by holding tightly to the rim of the can via Z-Flute strategic lamination

Consumer Experience

- Finger holes make package easy to carry and transport
- Cans are secured but can be easily removed once ready to consume
- Pack remains strong and intact in both cold and humid conditions
