

# TECHNICAL HIGHLIGHT

FEATURING:

## IQ Tablet and Changeover Checklist with Video

**A simple tool to assist our customers to efficiently and effectively operate, maintain and changeover GPI paperboard packaging machinery**

The IQ Tablet is an industrial PC tablet that is portable, but can also be conveniently stored in a docking station mounted on the machine. All machine documentation is available and easily retrievable on the tablet on demand.

The feature program on the tablet is the Changeover Checklist with Video HELP program. The checklist ensures that only the necessary steps for a certain procedure are displayed in the correct order to prevent collisions. Changeover steps are dynamic and allow recording of changeover set points that can be altered over time as needed. As each step is completed, it is “checked-off” on the checklist, ensuring everything is completed in order. If a user needs assistance on how to perform a particular changeover step, a video can be launched for quick and accurate instruction. A PDF SOP can also be launched to annotate the video with step-by-step directions. Customers routinely report that their technicians are able to changeover GPI packaging machinery on their first exposure to the machine using the IQ Tablet and Changeover Checklist with Video HELP.

There are a number of built-in features of the checklist that our customers find useful:

- Log-In feature
- Password protection
- Dual language
- Print to any connected printer
- Change/add/delete changeover steps
- Change/add/delete packs
- Ability to “highlight” active packs
- Change settings at any time – and keep track of last 99 – just in case
- View and retrieve past changes and changeovers
- Save and retrieve Servo Offsets for each pack
- New SMED feature helps to identify changeover steps to improve
- Ability to display videos, PDF and/or photos for help
