

MicroRite™

PRODUCT DESCRIPTION

MicroRite™ delivers the ultimate in convenience to consumers, providing oven quality results from the microwave. Unlike most microwaveable containers, MicroRite™ manages the microwave energy, reducing moisture loss, eliminating over cooked edges and improving product texture while providing more uniform product heating. Laboratory tests have shown MicroRite™ to provide these product improvements while reducing cook time by 50% compared to plain paperboard or CPET trays.

MicroRite™ susceptor technology combines the even heating technology of MicroRite™ with the browning and crisping benefits of susceptors. Ideally suited for pot pies, fruit pies and pizzas. MicroRite™ and MicroRite™ Susceptors can be utilized as trays, bowls and discs.

SPECIFICATIONS

Structure	INK/SBS/Adhesive/Foil/48ga PET
Dual Ovenable	Yes
Regulatory Compliance	FDA, CFIA, and EU compliant for reconstituting frozen and chilled foods in microwave and conventional ovens
Printing Possibilities	2 color flexographic plus coating
